Application/Control Number: 10/621,427

Art Unit: 2871

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 is *not* consistent with the drawing. Figs. 3A-B show the sliding adjustment 22 being outside of the display area, i.e. the sliding adjustment *not* being disposed *between* the common electrode 7 and the ground terminal 9. In claim 2, the recited feature "the ground point" lacks antecedent basis. In claim 5, the recited feature "the resistance between the common electrode and the ground terminal" lacks antecedent basis.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 7 is rejected under 35 U.S.C. 102(b) as being anticipated by JP 9-34381 (JP'381).

Note the abstract and Figs. 1(A)-(C) which identically disclose the claimed LCD panel comprising a main body (LCD 1) and a sliding adjustment (lever 7, groove 4a) disposed on the main body and having a guiding groove 4a and a sliding piece 7

Application/Control Number: 10/621,427

Art Unit: 2871

therein, the sliding piece being shifted in the guiding groove to change a resistance 5 acting on the main body.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Suh in view of JP 9-34381 (JP'381).

Suh discloses in Figs. 1, 4 and 5 an LCD panel, similar to that of the instant claims, comprising a variable resistance adjustment 20 disposed between a common electrode VCL (Fig. 1) and a ground point 18 for changing the common voltage of the common electrode (page 1, paragraphs 0011 – 0018). As to claim 4, note the compensation capacitor in row GL2 being connected to the common electrode VCL. Thus, the only difference between the LCD panel of Suh and that of the instant claims is a sliding variable resistor. However, the JP'381 discloses that it was known to employ a sliding variable resistor, as mentioned in the above rejection of claim 7. Thus, it would have been obvious to a person of ordinary skill in the art in view of JP'381 to employ a sliding variable resistor as the variable resistance adjustment in Suh's LCD panel for allowing the user to easily and accurately adjust the resistance, as compared with other types of variable resistors.

Art Unit: 2871

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication should be directed to Tai Duong at telephone number (571) 272-2291.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
